Hi Peter,

This came up from a conversation we have had here at the DPW trying to solve the problem of clogged pumps from things being flushed into the system that should not be. At this point it would be a request not a regulation. Although we will be working towards adding something to the regs in the future with the continued rise in interest of mixed use and larger multi unit buildings.

Becca please feel free to add any thoughts.

Best regards,
Dan

Hi Peter,

I don't have much to add to Dan's response other than I was unable to find another town with a similar regulation on a quick check. However, this issue is becoming more prevalent with infrastructure aging. This is a best practice that the Water and Sewer Dept. is looking into for future regulation updates.

Thanks,
Becca
