CDS 2015-4C / 1515-3C UNIT(S)

RESPONSIBILITY FOR MAINTENANCE: OWNER

NEW INSTALLATIONS

THE CONDITION OF EACH UNIT SHALL BE CHECKED AFTER EVERY RUNOFF EVENT FOR THE FIRST 30 DAYS. THE VISUAL INSPECTION SHALL ASCERTAIN THAT THE UNIT IS FUNCTIONING PROPERLY AND SHALL MEASURE THE AMOUNT OF SEDIMENT THAT HAS ACCUMULATED IN THE SUMP AND FLOATING TRASH AND DEBRIS IN THE SEPARATION CHAMBER. THIS CAN BE DONE WITH A CALIBRATED "DIP STICK" OR STADIA ROD SO THAT THE DEPTH OF DEPOSITION CAN BE TRACKED. SCHEDULES FOR INSPECTIONS AND CLEANOUT SHALL BE BASED ON STORM EVENTS AND POLLUTANT ACCUMULATION.

ONGOING OPERATION

DURING THE RAINFALL SEASON, THE UNIT SHALL BE INSPECTED AT LEAST ONCE EVERY 30 DAYS. THE FLOATABLES SHALL BE REMOVED AND THE SUMP CLEANED WHEN THE SUMP IS AT A DEPTH OF 2 FEET. IF FLOATABLES ACCUMULATE MORE RAPIDLY THAN THE SETTLEABLE SOLIDS, THE FLOATABLES SHALL BE REMOVED USING A VACTOR TRUCK OR DIP NET WHEN THE LAYER IS TWO FEET THICK.

CLEANOUT OF THE UNITS SHALL BE PERFORMED NO LATER THAN MAY 1ST BECAUSE OF THE NATURE OF POLLUTANTS COLLECTED AND THE POTENTIAL FOR ODOR GENERATION FROM THE DECOMPOSITION OF MATERIAL COLLECTED AND RETAINED. THIS END OF SEASON CLEANOUT WILL ASSIST IN PREVENTING THE DISCHARGE OF PORE WATER FOR THE UNITS DURING PERIODS OF LOW RAINFALL. THE UNITS SHALL BE CLEANED AT LEAST TWICE YEARLY.

CLEANOUT AND DISPOSAL

STANDARD VACTORING OPERATIONS SHALL BE EMPLOYED IN THE CLEANOUT OF THE UNITS. DISPOSAL OF MATERIAL FROM THE UNITS SHALL BE IN ACCORDANCE WITH APPLICABLE LOCAL, STATE, AND FEDERAL GUIDELINES AND REGULATIONS. DISPOSAL OF THE DECANT MATERIAL TO A POTW IS RECOMMENDED. FIELD DECANTING TO THE STORM DRAINAGE SYSTEM SHALL NOT BE PERMITTED. SOLIDS CAN BE DISPOSED SIMILAR TO NORMAL PRACTICES FOR MATERIALS COLLECTED FROM CATCH BASIN CLEANING.

GravityStone® Fat Face& Fat Face-2/3 Scored

INTRODUCTION

Part of the GravityStone family of wall systems, Fat Face and Fat Face - 2/3 Scored provide a strong, durable, and attractive retaining wall solution for a variety of site conditions. Fat Face is our original split face unit. Fat Face - 2/3 Scored is a three-piece set. Two units have a chamfered score located 2/3 along the length of the split face; the third unit an unscored split face. All three have well-defined chamfers molded into each end providing a distinctive sculptured appearance.

Both styles are one square foot blocks ideally suited for commercial, municipal and residential walls. The open-core design optimizes interlock from one course to the next with a "rock-to-rock" connection. For additional design flexibility, both Fat Face and Fat Face - 2/3 Scored can be integrated together and used in combination with the GravityStone Modular System.

COMPOSITION & PERFORMANCE

Fat Face and Fat Face - 2/3 Scored are produced under controlled factory conditions, molded from a cement-rich mixture blended with select aggregates and pure iron oxide pigments formed under extreme pressure and vibration. Both styles can create straight, concave or convex retaining walls in either a vertical or battered configuration using a unique reversible alignment plug. When used with geogrid, walls as tall as 20' and higher can be constructed.

PHYSICAL CHARACTERISTICS

Ideal's wall products meet or exceed North American industry standards, including ASTM C1372 Standard Specification for Drycast Segmental Retaining Wall Units. Strict quality control ensures consistent strength and durability.

Fat Face:	Single standard unit
Fat Face - 2/3 Scored:	2 scored units, 1 standard unit
Dimensions:	11.25"d x 8"h x 18"l
Weight:	75 lbs
Face Area:	1 sf/unit
Corner Unit:	6"d x 8"h x 15"l
Compressive Strength:	4500 psi minimum
Water Absorption:	7% maximum
Dimensional Tolerance:	+/- 1/8"
Wall Batter:	Vertical to 4.5° (3/4" per foot)

TECHNICAL INFORMATION & SERVICES

We recommend **WSB** Design software, **Ideal's** Contractor's Guide to Installing SRWs, and **NCMA's** SRWs Best Practice Guide as resources for design and technical information. We provide design consultation, including free Preliminary Engineering Design Service, specification assistance and job-site quality review.

DESIGN CONSIDERATIONS

Ideal provides general information on design and construction. In all cases, the user should exercise diligence in determining its suitability for the site. Walls 4' and higher, terraced walls, and sites with weak soils, slopes and surcharges require special consideration and construction techniques, including the use of geogrid. These conditions require the services of a qualified soils engineer and a professional contractor familiar with wall construction. Always comply with local building codes.

GENERAL CONSTRUCTION GUIDELINES

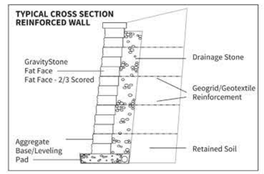
BASE: Establish a level, well-compacted, dense-graded aggregate base a minimum 8" below finished grade. Install perforated pipe as shown on the plans.

PLACEMENT OF FIRST COURSE OF BLOCKS: Block in the first course must be placed and carefully leveled front-to-back and side-to-side. For vertical walls, insert alignment plug in the forward position. For walls intended to batter, place the plug in the rear position. Fill the cores with graded stone. Place and compact dense-graded aggregate to fill the trench.

CONSTRUCTING THE WALL: Install additional courses in a running bond pattern, aligning the face of the units in a vertical position or with a 1/2" step-back as shown on the plans. Cut as needed to maintain a stagger. Insert plugs and fill cores with graded stone. Backfill and compact between and behind the units with graded stone. Repeat for each course.

REINFORCED RETAINING WALLS: When used, place geogrid as shown on the plans. Install with the design strength perpendicular to the wall. Avoid overlapping adjacent sheets. Use care not to damage grid when backfilling and compacting.

CAPPING WALL: Affix Ideal's Universal Coping™ or Ideal's natural stone coping using construction-grade adhesive. Add a 4" layer of low permeability soil, cover with topsoil and landscape per plans.



Always wear proper safety equipment when cutting or sawing concrete products.
A white deposit known as efflorescence may appear naturally on any concrete or masonry product. It does not affect the structural integrity and will dissipate over time. Efflorescence is not indicative of a flawed product. For more information, ask for our Efflorescence Advisory.

LSMT SERIES
High Lumen Output Scimitar LED Area Light

FEATURES & SPECIFICATIONS

APPLICATION – The high lumen cutoff luminaire is designed to be a replacement for HID fixtures up to 1500 W, in a variety of mounting configurations. The LSMT is ideal for use in parking lots, roadways and walkways. Its high efficiency and long life make it an excellent choice for new construction or where energy savings and low maintenance are important. ETL listed for wet locations (IP66). Additional IP66 rating available upon request. Optional motion sensor for use in occupancy or dusk to dawn applications. The high wattage/lumen output allows the fixture to be used for parking lots, roadways, public services, shopping centers or pretty lighting applications.

CONSTRUCTION – The heavy duty housing is constructed of cast aluminum with heat dissipating fins. The optical assemblies are sealed in place using a silicone gasket for weather tight protection. Rubber LED system for ease of maintenance. ETL listed for wet locations (IP66). Additional IP66 rating available upon request. Optional motion sensor for use in occupancy or dusk to dawn applications. The high wattage/lumen output allows the fixture to be used for parking lots, roadways, public services, shopping centers or pretty lighting applications.

FINISH – A corrosion resistant black E-Coat base that forms a uniform and oil-reinforcing protective barrier is applied to the fixtures prior to electrostatically applying a super durable powder coat finish. Standard colors available: Black, Bronze, Silver, White. Custom colors available upon request.

OPTICAL SYSTEM – Made with a state of the art UV stabilized acrylic high performance reflective optical assemblies that use high transmittivity materials to achieve precise photometric distributions. Available in a Type III beam configuration. Optics may be oriented sideways 90 degrees for perimeter lighting or additional asymmetrical beam options are not field reoriented. The full cutoff fixture is Dar Light Friendly (meets or exceeds Dark Sky requirements) at the horizontal position.

ELECTRICAL SYSTEM – Available in up to a 6 kV LED system in 5000K (Or CCR Cool White (+/- 500K) or 4100K Neutral White) color temperature (CRI 70). Powered by Philips Xitanium LED's. Constant Current Reset (CCR) Driver Module is available. Available with 120-277 VAC or 347-480 VAC input voltage. Driver is Class 2 Output Battery for high CRI (90+) motor availability
